

Create custom debian live usb-stick (stretch, amd64)

Install necessary packages on the build system

```
root@host:~# apt-get install debootstrap syslinux isolinux squashfs-tools
genisoimage memtest86+ rsync
[ ... ]
```

Create directory structure & install base image

```
root@host:~# mkdir /root/shtf-stick && cd /root/shtf-stick

root@host:~/shtf-stick# debootstrap --arch=amd64 --variant=minbase stretch
chroot http://http.at.debian.org/debian/
[ ... ]
```

Perform basic configuration

```
root@host:~/shtf-stick# chroot ./chroot
root@host:/# echo shtf > /etc/hostname
root@host:/# passwd root
Enter new UNIX password:
Retype new UNIX password:
passwd: password updated successfully
root@host:/# mount none -t proc /proc && \
mount none -t sysfs /sys && \
mount none -t devpts /dev/pts && \
export HOME=/root && \
export LC_ALL=C && \
apt-get update && \
apt-get install dialog dbus --yes && \
dbus-uuidgen > /var/lib/dbus/machine-id

root@host:/# apt-get install --no-install-recommends --yes linux-image-amd64
firmware-linux-free systemd-sysv live-boot kbd console-data
[ ... ]
```

Install additional packages

```
root@host:/# apt-get install --no-install-recommends --yes \
```

```
network-manager net-tools wireless-tools wpaui tcpdump wget openssh-client  
\  
blackbox xserver-xorg-core xserver-xorg xinit xterm \  
pciutils usbutils gparted ntfs-3g hfsprogs rsync less curl tcpdump  
dosfstools syslinux partclone vim pv \  
firefox-esr chntpw lvm2 mdadm keepassx gdisk gnupg duplicity s3cmd bzip2  
lsof screen mc htop iproute2 inetutils-ping inetutils-traceroute netcat-  
openbsd  
  
[ ... ]
```

Cleanup & leave chroot environment

```
root@host:/# rm -f /vmlinuz* /initrd.img* /var/lib/dbus/machine-id && \  
apt-get clean && \  
rm /etc/resolv.conf && \  
umount -lf /proc /sys /dev/pts  
  
root@host:/# exit  
exit  
root@debian:~/shtf-stick# umount -lf $(mount | awk '/shtf-stick/ { print $3  
'})  
root@host:~/shtf-stick# rm chroot/root/.bash_history
```

Create filesystem & boot config

```
root@host:~/shtf-stick# mkdir -p image/{live,isolinux} && \  
mksquashfs chroot image/live/filesystem.squashfs -e boot  
Parallel mksquashfs: Using 1 processor  
Creating 4.0 filesystem on image/live/filesystem.squashfs, block size  
131072.

cp /usr/lib/syslinux/modules/bios/ldlinux.c32 image/isolinux/ && \
cp /usr/share/misc/pci.ids image/isolinux/ && \
cp /boot/memtest86+.bin image/live/memtest && \
cd image && \
genisoimage -rational-rock -volid "SHTF" -cache-inodes -joliet -full-
iso9660-filenames -b isolinux/isolinux.bin -c isolinux/boot.cat -no-emul-
boot -boot-load-size 4 -boot-info-table -output ../debian-shtf-$(date
+%Y%m%d_%H%M).iso . && \
cd ..
```

Prepare USB stick

```
root@host:~/shtf-stick# export DEVICE=/dev/sdc
root@host:~/shtf-stick# dd if=/dev/zero of=${DEVICE} bs=1k count=100
100+0 records in
100+0 records out
102400 bytes (102 kB) copied, 1.5086 s, 67.9 kB/s
root@host:~/shtf-stick# fdisk ${DEVICE}
```

```
Welcome to fdisk (util-linux 2.25.2).
Changes will remain in memory only, until you decide to write them.
Be careful before using the write command.
```

```
Device does not contain a recognized partition table.
Created a new DOS disklabel with disk identifier 0x374a220b.
```

```
Command (m for help): n
Partition type
   p   primary (0 primary, 0 extended, 4 free)
   e   extended (container for logical partitions)
Select (default p): p
Partition number (1-4, default 1):
First sector (2048-2005431, default 2048):
Last sector, +sectors or +size{K,M,G,T,P} (2048-2005431, default 2005431):
```

```
Created a new partition 1 of type 'Linux' and of size 978.2 MiB.
```

```
Command (m for help): a
Selected partition 1
The bootable flag on partition 1 is enabled now.
```

```
Command (m for help): t
Selected partition 1
```

```
Hex code (type L to list all codes): b
If you have created or modified any DOS 6.x partitions, please see the fdisk
documentation for additional information.
Changed type of partition 'Linux' to 'W95 FAT32'.

Command (m for help): w
The partition table has been altered.
Calling ioctl() to re-read partition table.
Syncing disks.

root@host:~/shtf-stick# mkdosfs -F 32 -I ${DEVICE}1
mkfs.fat 3.0.27 (2014-11-12)

root@host:~/shtf-stick#
```

Create USB Stick

```
root@host:~/shtf-stick# export DEVICE=/dev/sdc
root@host:~/shtf-stick# syslinux -i ${DEVICE}1

root@host:~/shtf-stick# dd if=/usr/lib/syslinux/mbr/mbr.bin of=${DEVICE}
conv=notrunc bs=440 count=1
1+0 records in
1+0 records out
440 bytes (440 B) copied, 0.0564548 s, 7.8 kB/s

root@host:~/shtf-stick# mkdir /mnt/usb; \
mount ${DEVICE}1 /mnt/usb

root@host:~/shtf-stick# cp /usr/lib/syslinux/modules/bios/libutil.c32
/mnt/usb/ && \
cp /usr/lib/syslinux/modules/bios/libmenu.c32 /mnt/usb/ && \
cp /usr/lib/syslinux/modules/bios/menu.c32 /mnt/usb/ && \
cp /boot/memtest86+.bin /mnt/usb/memtest && \
cp image/isolinux/isolinux.cfg /mnt/usb/syslinux.cfg && \
cp /usr/share/misc/pci.ids /mnt/usb/ && \
rsync -rv image/live /mnt/usb/ && umount /mnt/usb/
sending incremental file list
