

Create custom debian live usb-stick (uefi / bios dual boot)

Install necessary packages on the build system

```
root@host:~# apt-get install debootstrap squashfs-tools rsync xorriso grub-  
pc-bin grub-efi-amd64-bin mtools  
[ ... ]
```

Create directory structure & install base image

```
root@host:~# mkdir /root/shtf-stick && cd /root/shtf-stick  
  
root@host:~/shtf-stick# debootstrap --arch=i386 --variant=minbase stretch  
chroot http://http.at.debian.org/debian/  
[ ... ]
```

Perform basic configuration

```
root@host:~/shtf-stick# chroot ./chroot  
root@host:/# echo shtf > /etc/hostname  
root@host:/# passwd root  
Enter new UNIX password:  
Retype new UNIX password:  
passwd: password updated successfully  
root@host:/# mount none -t proc /proc && \  
mount none -t sysfs /sys && \  
mount none -t devpts /dev/pts && \  
export HOME=/root && \  
export LC_ALL=C && \  
apt-get update && \  
apt-get install dialog dbus --yes && \  
dbus-uuidgen > /var/lib/dbus/machine-id  
  
root@host:/# apt-get install --no-install-recommends --yes linux-image-686  
firmware-linux-free systemd-sysv live-boot kbd console-data  
[ ... ]
```

Install additional packages

```
root@host:/# apt-get install --no-install-recommends --yes \  

```

```
network-manager net-tools wireless-tools wpagui tcpdump wget openssh-client  
\  
blackbox xserver-xorg-core xserver-xorg xinit xterm \  
pciutils usbutils gparted ntfs-3g hfsprogs rsync less curl tcpdump  
dosfstools syslinux partclone vim pv \  
firefox-esr chntpw lvm2 mdadm keepassx gdisk gnupg duplicity s3cmd bzip2  
lsof screen mc htop iproute2 inetutils-ping inetutils-traceroute netcat-  
openbsd  
  
[ ... ]
```

Cleanup & leave chroot environment

```
root@host:/# rm -f /vmlinuz* /initrd.img* /var/lib/dbus/machine-id && \  
apt-get clean && \  
rm /etc/resolv.conf && \  
umount -lf /proc /sys /dev/pts  
  
root@host:/# exit  
exit  
root@debian:~/shtf-stick# umount -lf $(mount | awk '/shtf-stick/ { print $3  
'})  
root@host:~/shtf-stick# rm chroot/root/.bash_history
```

Create filesystem & boot config

```
root@host:~/shtf-stick# mkdir -p ./{scratch,image/live} \  
mksquashfs chroot image/live/filesystem.squashfs -e boot

Welcome to fdisk (util-linux 2.25.2).
Changes will remain in memory only, until you decide to write them.
Be careful before using the write command.

Device does not contain a recognized partition table.
Created a new DOS disklabel with disk identifier 0x374a220b.

Command (m for help): n
Partition type
   p   primary (0 primary, 0 extended, 4 free)
   e   extended (container for logical partitions)
Select (default p): p
Partition number (1-4, default 1):
First sector (2048-2005431, default 2048):
Last sector, +sectors or +size{K,M,G,T,P} (2048-2005431, default 2005431):

Created a new partition 1 of type 'Linux' and of size 978.2 MiB.

Command (m for help): a
Selected partition 1
The bootable flag on partition 1 is enabled now.

Command (m for help): t
Selected partition 1
Hex code (type L to list all codes): b
If you have created or modified any DOS 6.x partitions, please see the fdisk
documentation for additional information.
Changed type of partition 'Linux' to 'W95 FAT32'.

Command (m for help): w
The partition table has been altered.
Calling ioctl() to re-read partition table.
Syncing disks.
