Docker Configuration via /etc/docker/daemon.json

Prevent Creation of dynamic iptables rules, disable userland proxy

```
{
        "iptables": false,
        "ip-masq": false,
        "userland-proxy": false
}
```

Create iptables rules manually

```
iptables -A FORWARD -s $dockernetwork -m tcp -p tcp -m conntrack --ctstate
NEW -j ACCEPT

===== Configure DNS server=====
<code>
{
        "dns": ["192.168.100.254"]
}
```

linux, docker
