

Docker Configuration via /etc/docker/daemon.json

Prevent Creation of dynamic iptables rules, disable userland proxy

```
{  
    "iptables": false,  
    "ip-masq": false,  
    "userland-proxy": false  
}
```

Create iptables rules manually

```
iptables -A FORWARD -s $dockernetwork -m tcp -p tcp -m conntrack --ctstate NEW -j ACCEPT
```

===== Configure DNS server=====

```
<code>  
{  
    "dns": ["192.168.100.254"]  
}</code>
```

[linux](#), [docker](#)
