Situation

LineageOS 14.1 installed, TWRP 3.0.0 installed, phone working properly. After an OTA update gone wrong, the phone did not boot into system but only into TWRP recovery.

1st Try

Based on fix-twrp-boot-loop the first try was to install a newer version of TWRP. This resulted in the phone unable to boot at all.

Resolution

- 1. Boot into fastboot (VOL+ and Power)
- 2. Flash TWRP 3.0.0
- 3. fastboot erase recovery
