

Simple IP-Address Watchdog

```
$ crontab -l
@reboot /usr/bin/sleep 60 && /usr/bin/curl -kso /dev/null
https://adurias.org/watchdog?hostname=$(hostname)\&address=$(/usr/sbin/ip -4
route get 1.0.0.0 | /usr/bin/awk '/dev/ { print $7 }')
```

Results are seen in the access.log of the webserver placed in the curl call

```
$ grep watchdog access.log
