

# rsyslogd logs “action ‘action nn’ suspended”

Might be caused by nothing listening on /dev/xconsole – remediation: Comment out the relevant entries in /etc/rsyslogd.conf:

Change:

```
daemon.*;mail.*;\n    news.err;\n    *.=debug;*.=info;\n    *.=notice;*.=warn      |/dev/xconsole
```

To:

```
#daemon.*;mail.*;\n#\n#    news.err;\n#    *.=debug;*.=info;\n#    *.=notice;*.=warn      |/dev/xconsole
```
