Wordpress

Things to check, if WordPress Permalinks do not work:

1. mod_rewrite enabled
2. AllowOverride FileInfo set for DocumentRoot (or WordPress subdirectory)
3. .htaccess File is correctly generated (include potential WordPress subdirectory)

SSL behind reverse Proxy

1. correct protocol in DB/
2. add the following to wp-config.php

```
/** Fix protocol if accessed via reverse proxy */
if ($_SERVER['HTTP_X_FORWARDED_PROTO'] == 'https')
        $_SERVER['HTTPS']='on';
```

kb, wordpress
